Game Rules

There are no game rule updates at this time.

Game Q & A

1. Can we use wires outside the ones provided in the kit?
Any wires, connectors, headers, etc. are considered mechanical parts. As such you are allowed to add any passive components to improve your design. This includes springs, elastics and passive pneumatics such as balloons. This is in compliance with R3 and R4 of the Game Manual
2. Can we use Lego or other electronic parts?
According to the Game Manual R3 and R4, no other electronic parts can be used. This includes Lego WeDo, NXT, EV3, etc. This also includes any sensors. However regular Lego bricks, beams, meccano or Tinker Toys, etc are allowed as long as they do not contain any electronic or electrical components.
3. How about Lego pneumatics or custom pumps?
Due to the expensive nature of Lego Pneumatics we are excluding these parts. If you design your own 3D printed pneumatics that is fine, however any regulators, etc. cannot contain any electronic components outside the ones provided in the Kit of Parts.
4. Other allowable components
Wooden dowels, popsicle sticks, toothpicks, dental floss, screws, nails, etc. are all fine. As an example we would also allow making a "suction cup" by placing a piece of balloon for a rubber diaphragm over a cylinder and using a servo to engage/release it. This list is not exhaustive!
