## Game Rules

### Orientation of the cups.

The game manual has been updated to make it clear that the starting orientation of the cups is in an “upright” position. The definition for upright is not sideways. So it;s up to each participant to decide if they want cups with the bottom or open part up.

### R1. Robot maximum dimensions and weight.

The metric dimensions for the during-the-match-max-size have been added as 25.40cm x 40.64cm.

### T1. Bracket.

Each participant will be randomly placed in a tournament with a maximum of 32 participants per tournament.

### G7. Scored cups cannot be returned to the field or moved to a higher-scoring zone.

Blue text in G7 is incorrectly referring to G6 and has been corrected to be G7.

### G14. The zones shift for teleop.

The first reference to G13 (penalty points for contact) should be G15.

**Please download the updated version of the manual, version 1.24 dated April 11, 2021 for all corrections.**

## Game Q & A

1. What happens if the robot violates the max in-game size?

Not fitting inside the starting box is a disqualification.
